Last Updated Friday, 28 March 2008

Solving Puzzles is my most popular fly program. It blends entomology, trout behaviors and how those two things relate to fly selection.

"Solving Puzzles" by Phil Fischer, Phil's Custom Trout

Flies:

Have you ever experienced trout rising consistently, only to throw your whole fly box at them and wind up frustrated? Solving Puzzles is an overview, from a fly tier's perspective, about fly patterns and the why's behind fly selection. In this presentation, Phil will share with you why certain patterns work well, and why others don't. He'll cover hatch periods, and what to look for on the water to determine what trout are feeding on, and what patterns effectively match each portion of the hatch. He'll review the Mayfly and Caddis fly life cycle through patterns, and share why you might fish with each pattern, and what makes it successful. Solving Puzzles is a result of many years of experience that pulls together the fundamentals of entomology, fly tying and fly fishing.
