[Midges](#)

Midges

Midges often present very challenging fly fishing situations. They are often very small and usually there are lot's of them available for trout to choose from. This selection includes a number of patterns that I've used in my local Sierra lakes, as well as some large western rivers. It brings to mind small flies on small tippets in smooth lake water. Cruising trout with many naturals to choose from. Some would say, "It doesn't get better than this"!

If you don't see a pattern that you're looking for, please contact me. I'm sure I can tie it for you.
